

# INTRODUCING

# PRECISIONRAP DK

## THINK OF A HAND STRETCH FILM THAT...

- has the best CONTAINMENT of any hand film in the market
- uses the least amount of stretch film to PROPERLY unitize a pallet
- is manufactured as a CORELESS product
- ensure CONSISTENCY no matter who is wrapping
- is already the most SUSTAINABLE hand wrapping system on the planet

Now imagine all those characteristics in a stretch film designed to DECAY and bio assimilate back to nature, with no harmful environmental impact, toxins or micro-plastics.

*THERE IS NO NEED TO "IMAGINE,"  
YOU ARE THINKING OF  
PRECISIONRAP DK*

Available today at no additional cost compared with our industry leading Precisionrap film.

Shouldn't your company be using  
PRECISIONRAP DK?

## HOW PRECISION DK WORKS

DK has a special additive package, Eclipse®, that causes ALL polyolefins to bio-assimilate (in general terms, 100% biodegradation and returning back to its original elements)

After extrusion, DK has a stable shelf life of two years, then the chemical reaction begins, causing the film to break down and attract micro-organisms that "devour" the carbon, the colony thrives and grows exponentially until the food source is gone

This incredible transformation will take place anywhere and cannot be stopped

If there is an abundance of UV rays, micro-organisms and heat, the process could take as little as 6 months

In the ocean or buried in a landfill, approximately 2 years

DK can also be included in the recycling stream with no negative impact

DK should always be part of a circular economy and recycled BUT if those facilities are not available OR the capacity does not exist, DK ensures that it will not become an environmental issue

DK costs the same as our regular Precisionrap product, so doing the RIGHT THING doesn't have to negatively impact your overall packaging costs.
