BISPHENOL A AND BISPHENOL DERIVATIVES
STATEMENT

Bisphenol A (BPA) is a common catalyst used to produce PVC, polycarbonate, and epoxy materials. It is not a component of the polyethylenes used to produce stretch films.

This is to certify that WP Innova does not intentionally add bisphenol A or bisphenol derivatives to any of the stretch films produced for distribution and sale.

In addition, to the best of our knowledge, no bisphenol A or bisphenol derivatives are present in the finished products supplied by WP Innova.

Please contact your WP Innova sales representative if you have additional questions.

A handwritten signature in black ink, appearing to read 'V. Kim', is positioned above the printed name.

Viktor Kim

Quality Assurance Manager
